DETAILED ACTION

Allowable Subject Matter

1. Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding **claim 1** the prior art of record neither anticipates nor renders obvious, "an address sub-sampling apparatus, comprising:

a counting unit that generates a binary address of N bits, N being a natural number larger than 2; and

an address conversion unit that sub-samples the binary address of N bits to output a sub-sampled address having first, second and third bit groups, wherein the sub-sampled address is arranged in order of the third, the first and the second bit groups from the MSB (Most Significant Bit), the first bit group, which is a combination of digits in the sub-sampled address corresponding to the number of addresses to be skipped, being set as "0", the second bit group, which includes the LSB (Least Significant Bit) corresponding to bits of the binary address, and the third bit group, which includes the MSB being set to shift address subtracted by the number of bits in the first bit group from the MSB in the binary address."

Regarding **claim 5** the prior art of record neither anticipates nor renders obvious, "an image sensor of line scanning manner, comprising:

a first counting unit that generates a first binary address of X bits in synchronization with a preset data clock signal, X being a natural number larger than 2;

a first address conversion unit that sub-samples the first binary address of X bits to provide a first sub-sampled address having first, second and third bit groups;

a second counting unit that generates a second binary address of Y bits in synchronization with a preset line clock signal, Y being a natural number larger than 2; and a second address conversion unit that sub-samples the second binary address of Y bits to output a second sub-sampled address having first, second and third bit groups, wherein each of the first and the second sub-sampled addresses is arranged in order of the third, the first and the second bit groups from the MSB (Most Significant Bit), the first bit group, which is a combination of digits in the sub-sampled address corresponding to the number of addresses to be skipped, being set as "0", the second bit group, which includes the LSB (Least Significant Bit) corresponding to bits of the binary address, and the third bit group, which includes the MSB being set to shift address subtracted by the number of bits in the first bit group from the MSB in the binary address."

Regarding **claim 11** the prior art of record neither anticipates nor renders obvious, "an address sub-sampling method, comprising:

generating a binary address of N bits, N being a natural number larger than 2; and

sub-sampling the binary address of N bits to output a sub-sampled address that is provided in such a way that third, first, and second bit groups of the sub-sampled addresses are arranged in sequence from the MSB (Most Significant Bit), the first bit group, which is a combination of digits in the sub-sampled address corresponding to the number of addresses to be skipped, being set as "0", the second bit group, which includes the LSB (Least Significant Bit) corresponding to bits of the binary address, and the third bit group, which includes the MSB being set to shift address subtracted by the number of bits in the first bit group from the MSB in the binary address."

Regarding **claim 12** the prior art of record neither anticipates nor renders obvious, "a sub-sampling method for use in an image sensor, comprising:

generating a first binary address of X bits in synchronization with a preset data clock signal, and generating a second binary address of Y bits in synchronization with a preset line clock signal, both X and Y being natural numbers larger than 2; and

sub-sampling the first and the second binary addresses to output first and second sub-sampled addresses that are provided in such a way that third, first,

and second bit groups of each of the first and the second sub-sampled addresses are arranged in sequence from the MSB (Most Significant Bit), the first bit group, which is a combination of digits in the sub-sampled address corresponding to the number of addresses to be skipped, being set as "0", the second bit group, which includes the LSB (Least Significant Bit) corresponding to bits of the binary address, and the third bit group, which includes the MSB being set to shift address subtracted by the number of bits in the first bit group from the MSB in the binary address."

Regarding **claims 2-4, 6-10, and 13-14**, the claims are allowed as being dependent of claims 1, 5, 11 and 12, respectively.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
